

Assignment No. 4.5 and miniproject 1

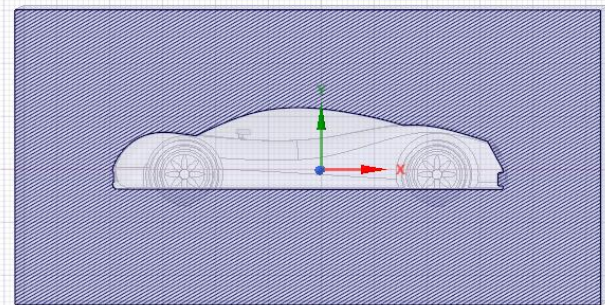

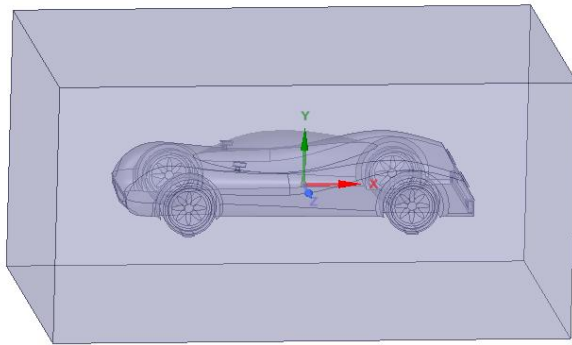

28.7.2026

Student Name: Hrivu Prasun Halder

Username/email id: hrivuprasunhalder@gmail.com

Car Enclosure

- Enclosure created
- Fluid domain extracted from the enclosure. The car was subtracted using combine tool in the design tab, leaving the only fluid domain of interest

Volume extraction from Centrifugal pump

- I also deleted the turbine as it was explicitly asked to extract only the fluid domain, even though it may be useful for turbomachinery simulations(I am not certain, sorry 😞)
